Food Delivery App

1. Title

Design and Development of a Food Delivery Mobile App Prototype

2. Aim

The aim of this project is to design a **user-friendly food delivery mobile application prototype** that allows users to browse restaurants, select food items, add them to a cart, and place orders easily.

3. Objective

- To design a simple and intuitive **food ordering interface**.
- To provide **easy navigation** between screens.
- To allow users to **browse food categories and restaurants**.
- To implement **cart and payment options** for order confirmation.

4. Tools Used

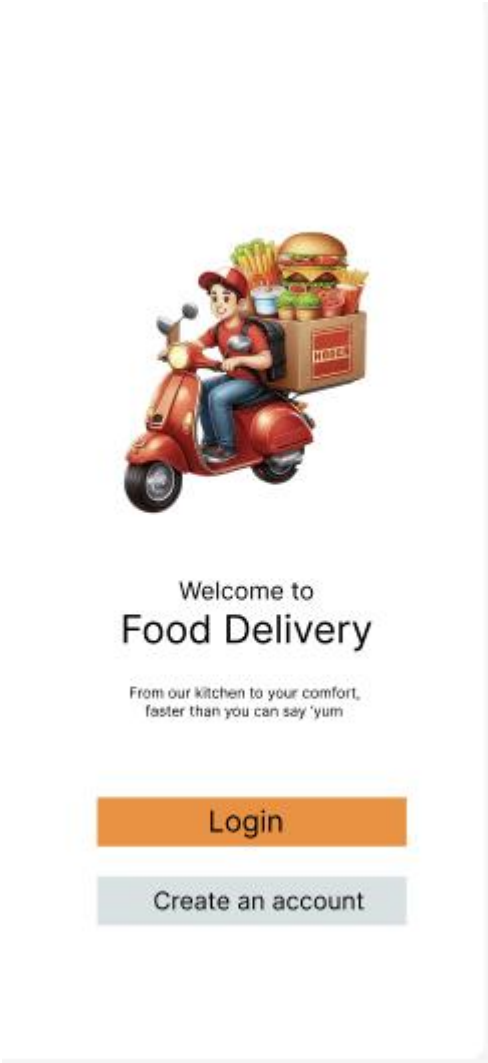
- **Proto.io** – for creating the prototype
- **Mobile UI Components** – for designing interface elements
- **Images and Icons** – for food items and navigation

5. Description of the Prototype

The prototype consists of **five main screens**:

5.1 Login Screen

The login screen welcomes users and allows them to access the application.



Features:

- Welcome message for users
- Login button for existing users
- Create account option for new users

Purpose:

This screen provides **authentication and entry into the application**.

5.2 Home Screen

The home screen is the main interface where users explore food options.

Features:

- Greeting message (Good Morning Julia)
- Search bar to find food items
- Food categories such as:
    - Biryani

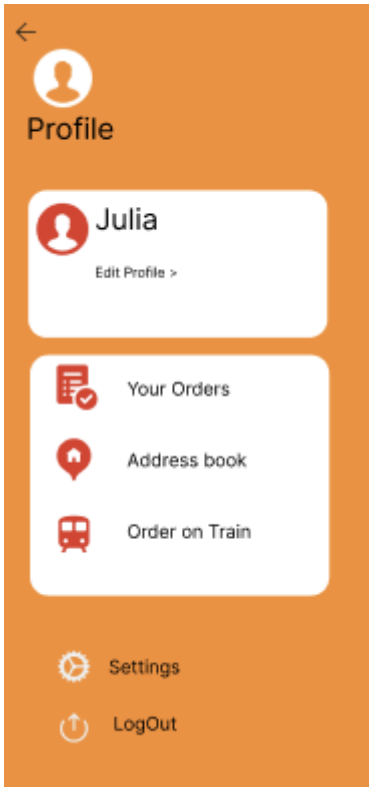
    - Burger
    - Samosa
    - Momos
    - Noodles
    - Chicken 65
- Restaurant list displaying available restaurants

Purpose:

This screen allows users to **discover restaurants and food items easily**.

5.3 Profile Screen

The profile screen allows users to manage their personal information and account.



Features:

- User profile information
- Edit profile option
- Order history
- Address book

- Order on train option
- Settings option
- Logout option

Purpose:
This screen helps users **manage their account and order details**.

5.4 Menu Screen

The menu screen displays food items available in a selected restaurant.

Features:

- List of food items with images
- Price of each item
- Quantity selection (+ / –)
- Add to cart option

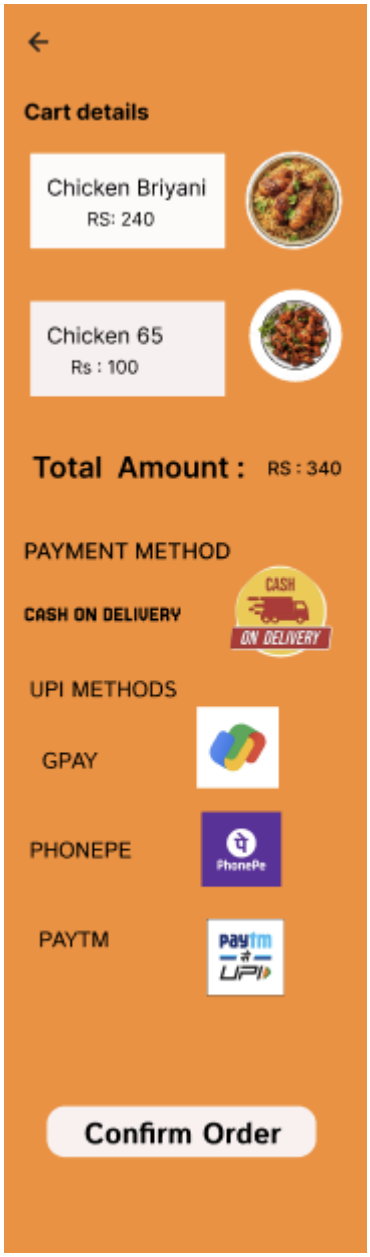
Example Items:

- Chicken Biryani
- Burger
- Chicken Noodles
- Chicken 65
- Chicken Gravy
- Tandoori
- Meals

Purpose:
Users can **select food items and add them to their cart**.

5.5 Cart and Payment Screen

This screen displays selected items and allows users to complete the order.

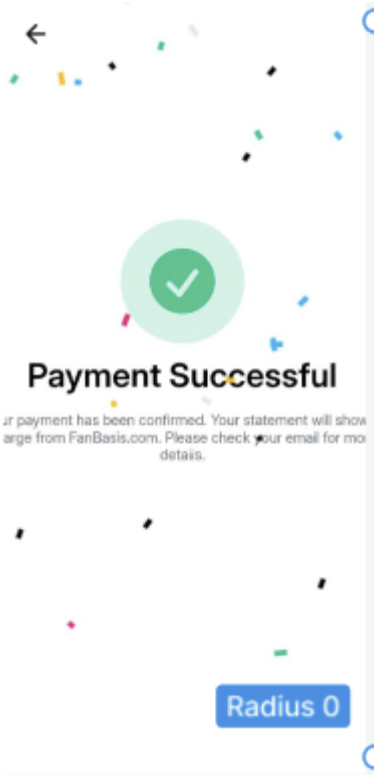


Features:

- Selected food items with price
- Total amount calculation
- Payment methods:
    - Cash on Delivery
    - Google Pay
    - PhonePe
    - Paytm
- Confirm order button

Purpose:
This screen allows users to **review and place their final order**.

Payment successful:



6. Navigation Flow

The navigation flow of the application is:

Login Screen
↓
Home Screen
↓
Restaurant Selection
↓
Menu Screen
↓
Cart Screen
↓
Payment and Order Confirmation

7. Advantages of the Prototype

- Simple and easy user interface
- Quick food browsing and ordering
- Multiple payment options
- Clear navigation between screens

8. Limitations

- Prototype does not connect to real restaurant databases
- Payment gateway is not integrated
- Real-time order tracking is not included

9. Future Improvements

- Add real-time **order tracking**
- Integrate **online payment gateways**
- Add **restaurant ratings and reviews**
- Provide **delivery time estimation**

10. Conclusion

The food delivery app prototype demonstrates a simple and effective user interface for ordering food online. The application allows users to easily browse restaurants, select food items, add them to the cart, and choose payment methods. The prototype successfully shows how a food delivery application can provide a convenient and user-friendly ordering experience.
